

Travor Chiweshe

Harare, Zimbabwe

Full-Stack Engineer | AI Platform Developer |
Cloud Software Architect

Open to AI Engineering Opportunities

APPLICATION TARGET

AI Developer / Full Stack Software Engineer

Econet AI

Professional Story

Hello, My name is Travor Chiweshe. I am a Zimbabwean software engineer based in Chitungwiza, Harare, born on 10 October 2000. I specialize in full-stack development, AI-driven platforms, and cloud software architecture, with a passion for designing scalable digital ecosystems, enterprise applications, and innovative technology solutions that solve real-world problems. When I came across this opportunity, I immediately jumped at the chance to apply because I believe artificial intelligence is one of the most important technology shifts of our generation, especially in Africa where intelligent systems can create meaningful impact. Through building platforms such as DevClout Digital Systems and the NextWave E-Ticketing Platform, I have gained practical experience in software architecture, automation, cloud systems, and developing production-ready digital platforms. I am excited about the opportunity to contribute my engineering experience, creativity, and passion for AI-driven solutions to a team building the future of intelligent technology.

I am interested in contributing my experience in software engineering, AI platforms, and scalable technology systems to help build practical artificial intelligence solutions that create meaningful impact.

Application

Econet AI

AI Developer / Full Stack Software Engineer

Technology recruitment application

AI Focus Areas

Artificial Intelligence Applications in Africa

Enterprise AI Solutions

Intelligent Business Automation

AI-assisted Software Engineering

Document Intelligence

Technical Skills

A comprehensive overview of my software engineering expertise, covering application development, backend systems, cloud infrastructure, artificial intelligence, and modern engineering practices.

SoftwareEngineering

- JavaScript
- TypeScript
- React
- Node.js
- Express.js
- REST API Development
- Enterprise Application Architecture

Backend

- MongoDB
- Mongoose
- Authentication Systems
- JWT Security
- RBAC
- API Architecture
- Background Processing

Frontend

- React
- Vite
- Tailwind CSS
- Framer Motion
- Progressive Web Applications
- Design Systems

Cloud

- AWS EC2
- Linux Administration
- Nginx
- Production Deployment
- Environment Management

Ai

- AI Platform Architecture
- AI Product Development
- Intelligent Document Processing
- Automation Workflows
- LLM Integration Concepts

Education

Bachelor of Computer Science (Engineering Studies)

Vistula University, Warsaw, Poland

2020 - 2024 • Full-time Engineering Studies

Computer Science | Cybersecurity & Computer Networks Engineering

173 ECTS Credits

325-hour Professional Industry Training

Relevant Coursework

Software Engineering

Python for Data Science and Artificial Intelligence

Introduction to Cloud Technologies

Distributed Computer Systems

Algorithm and Complexity

Object-Oriented Programming

Database Systems

Computer Networks

Network Security

Operating Systems

Professional Experience

Founder / Lead Software Engineer

DevCloud Digital Systems (Pvt) Ltd • 2026 Feb - Present

- Designed and developed enterprise software ecosystems
- Architected scalable full-stack applications
- Built reusable authentication, document, UI and workflow systems
- Developed NextWave digital ticketing platform
- Created cloud deployed production applications
- Designed modular platform architecture supporting multiple business applications
- Implemented document intelligence foundations including verification workflows and PDF generation

FEATURED PROJECT 1

NextWave E-Ticketing Platform

Project Overview

A full-scale digital event platform designed to connect event organizers, attendees, entrepreneurs, and professional service providers through a unified platform. The system combines event management, digital ticketing, community engagement, marketplace discovery, and service coordination into a single event technology infrastructure.

Platform Capabilities

- ✓ Event organizer management platform
- ✓ Event creation and lifecycle management
- ✓ Digital ticketing and admission workflows
- ✓ QR-based ticket verification system
- ✓ Ticket marketplace and resale infrastructure
- ✓ Event community engagement system
- ✓ Professional event services marketplace
- ✓ Vendor and entrepreneur discovery
- ✓ Catering, transport, security, entertainment and event service coordination
- ✓ Organizer analytics and sales dashboards
- ✓ Real-time event communication

Technology Stack

- React
- Vite
- Tailwind CSS
- Framer Motion
- Node.js
- Express.js
- MongoDB
- Mongoose
- Socket.IO
- AWS
- REST APIs

Architecture Principles

- ✓ Multi-sided platform architecture
- ✓ Event-driven communication architecture
- ✓ Marketplace ecosystem design
- ✓ Scalable REST API infrastructure
- ✓ Modular service architecture
- ✓ Cloud-based deployment architecture

FEATURED PROJECT 2

DevClout Enterprise Ecosystem

Project Overview

A modular enterprise software ecosystem providing reusable infrastructure for business operations, document management, developer tools, investor relations, administration, and digital workflow automation.

Platform Capabilities

- ✓ Enterprise administration platform
- ✓ Digital document management system
- ✓ Document verification and registry workflows
- ✓ Business workflow automation
- ✓ Developer tools and reusable components
- ✓ Investor relationship management
- ✓ Organization and user management
- ✓ Role-based access control systems

Technology Stack

- React
- Node.js
- Express.js
- MongoDB
- Mongoose
- AWS
- REST APIs
- Document Processing Systems

Architecture Principles

- ✓ Modular enterprise architecture
- ✓ Document management architecture
- ✓ Reusable component ecosystem
- ✓ Cloud deployment infrastructure
- ✓ Shared identity and authentication services
- ✓ Service-oriented application design

My Perspective on Artificial Intelligence

A personal reflection on the role of AI in accelerating human creativity, innovation, and technological progress.

I believe the world should not approach artificial intelligence with fear, but with curiosity, responsibility, and ambition. AI should not be viewed as a replacement for human creativity, but as a powerful tool that expands what people are capable of achieving.

Personally, I have always had more ideas than I could realistically build within a single lifetime. The challenge has never been a lack of imagination, but the limits of time, resources, and human capacity. Artificial intelligence has given me an opportunity to bring more of those ideas closer to reality by helping me design, explore, and prototype solutions that previously would have been beyond my reach.

I see AI as one of the greatest opportunities of our generation, especially for developing countries. Countries such as Zimbabwe and many parts of Africa are already competing in a global technology race where developed economies have significant advantages in infrastructure, investment, and resources.

However, artificial intelligence creates an opportunity to accelerate progress. By embracing AI faster, developing nations can improve productivity, build innovative solutions, empower entrepreneurs, and reduce the gap between emerging and advanced economies.

I believe the future belongs to those who learn how to combine human creativity with intelligent technology. My goal is to contribute to building AI-driven solutions that create meaningful impact, not only for businesses, but also for communities and future generations.

AI is not the end of human creativity. It is a new instrument that allows humanity to imagine bigger, build faster, and solve problems that once seemed impossible.
